

16. A device according to Claim 15, wherein the low-power-consumption mode is one of a park mode, a hold mode and a sniff mode.

17. A device according to Claim 13, wherein said device is a multimedia phone.

18. A method for controlling an input apparatus connectable to a plurality of devices, said method comprising:

a display step of displaying a list of the plurality of connected devices;

a selection step of selecting one of the plurality of devices based on the list displayed in said display step; and

an operation step of operating the device selected in said selection step.

19. A method for controlling an input apparatus, said method comprising:

a first connection step of performing radio connection to a plurality of devices;

an operation step of operating one of the plurality of devices subjected to radio connection; and

a second connection step of performing radio connection to the device operated in said operation step and to other devices in different modes.

20. A method for controlling a device, said method comprising:

00001513-101001

a connection step of performing radio connection to an input apparatus;

a setting step of performing setting so as to be operated by said input apparatus; and

a second connection step of performing radio connection to the input apparatus in a mode corresponding to the setting in said setting step.

21. A storage medium storing a program for controlling an input apparatus, said program comprising:

a display step of displaying a list of a plurality of connected devices;

a selection step of selecting one of the plurality of devices based on the list displayed in said display step; and

an operation step of operating the device selected in said selection step.

22. A storage medium storing a program for controlling an input apparatus, said program comprising:

a connection step of performing radio connection to a plurality of devices;

an operation step of operating one of the plurality of devices subjected to radio connection; and

a second connection step of performing radio connection to the device operated in said operation step and to other devices in different modes.

23. A storage medium storing a program for controlling a device, said program comprising:

a connection step of performing radio connection to an input apparatus;

a setting step of performing setting so as to be operated by the input apparatus; and

a second connection step of performing radio connection to the input apparatus in a mode corresponding to the setting in said setting step.
